

Enhance makes your cleaning easier and less frequent; however it is recommended that you continue to clean the surfaces regularly.

Depending on local conditions and minerals content, please follow the below cleaning guide to keep protected glass clean, and for removing build-up from the coated surface.

Interior Glass such as shower glass: Once a week or as needed for build-up, wipe down the glass with a microfiber cloth dampened with white vinegar and a drop of non-abrasive liquid soap (hand, body, or dish). Rinse and dry.

Tip: For best results, wipe down the glass after each use with a good-quality squeegee. This will reduce mineral spotting, keeping the glass cleaner between cleans.

Exterior Glass: Clean as needed with a mild detergent and water using a t-bar mop assembly and squeegee. For light build-up wipe down the glass with a microfiber cloth dampened with white vinegar and a drop of non-abrasive liquid soap (hand, body, or dish). Rinse and dry.

Tip: For best results, clean the glass when covered with shade to prevent streaking. In areas prone to salt build-up or dust build-up, rinse off excess contaminants with fresh water before cleaning.

Note: If you have professional cleaners, please provide a copy of the cleaning instructions to them and ensure they follow instructions to avoid damaging your Enhance coating and voiding the warranty. If you are unsure of the cleaning process or finding any difficulties, please contact Enhance.

Hard Water Maintenance or Build-up

In hard water areas, or areas where water drops dry and leave a noticeable dust mark, a build of minerals may occur on the protective treatment.

- Light build-up: spray undiluted white vinegar on the glass and allow to remain for several minutes. Spray again and firmly wipe down the glass with a microfiber, rinse, and dry. Repeat as needed until the glass is clean
- Moderate to Heavy build-up: Spray undiluted white vinegar on the glass and allow to soak for several minutes. Dampen a Magic Eraser® or other melamine cleaning pad with vinegar, and wipe down the glass with light to moderate pressure. Repeat as needed with more vinegar until the glass is clean
- Extreme build-up: Dampen a Magic Eraser® or other melamine cleaning pad with undiluted CLR® (Calcium Lime Rust remover) and a drop of liquid soap. Rub with light to moderate pressure for a few minutes, squeeze out the pad, and repeat with more CLR®. Rinse and dry the glass to inspect, and repeat as needed until the glass is clean.

Important: Keep in mind that as the vinegar or CLR® are dissolving mineral build-up they become less effective. It is beneficial to squeeze out and dampen every few minutes for best effect. Once **ALL** build-up has been removed, the water should again bead into tall, round drops on the clean surface.

Approved Cleaning Products

While all that should be needed to keep the glass looking clean are a squeegee, good quality mild liquid soap, and white vinegar, occasionally we are asked to recommend specific products. Some major brand cleaners are listed below, but keep in mind they should not be necessary, and often have very limited benefits in removing either soap or mineral build-up.

- SprayWay® (or other alcohol based foaming cleaners)
- Scrubbing Bubbles® (or other automatic leave-to-dry daily shower cleaners)
- 7th Generation®, Dawn® (or other mild eco-friendly cleaners)
- CLR® (Calcium Lime Rust)
- Mr. Clean Magic Eraser® (when damp)
- Windex (Standard®, vinegar, alcohol, ammonia)

It should be noted that with any cleaner used on the Enhance surface a thorough rinse with clean water should follow immediately.

Caution: What to avoid

Note: These may damage the treatment and void any warranty

- Abrasives including water spot removers, toothpaste, polishes, Norwex Cloths, rough, or gritty substances
- Acids or Alkalis that you would not want in contact for your skin for an extended period of time
- Harsh or chemical cleaners. With correct maintenance, these are not required.

If for any reason the recommended maintenance has not been followed for some time, just as it took time for the build-up to occur, it will take time to remove the debris from the protected glass surface. This can most commonly be achieved using undiluted white vinegar dampened on a Magic Eraser®, or CLR® on a Magic Eraser®. Depending on the severity of the build-up this may take multiple attempts, but once the glass is clean again it will perform like new. Should you have any questions regarding the cleaning of your treated surfaces please contact Enhance.
